

**Designing Your System**

What makes Flaming River unique is that we have designed a complete steering system . . . from rack and pinion or steering box through the universal joints to the tilt column and even the steering wheel. Did you know we can make a column with a Ford spline to fit your classic Mustang or 40 Ford wheel.

**Dont forget the Accessories**

To make your installation as simple as possible, we recommend considering the following installation kits:

- Mustang column: FR200MUKT (long shaft) FR200MUKT2 (short shaft)
- Floor mount cover, FR20100CVR.
- New Install Kits for Classic Vehicles
- Column Drops: 1-3/4 inch or 2 inch. See page 49
- Column shift: Optional overdrive lens FR20010LNO
- OEM Mount FR20114 recommended for Classic Columns
- Floor Mounts FR20100, 1-3/4 inch column, and FR20101, 2 inch column. Floor mount cover, FR20100CVR
- New Universal 5 and 6 bolt Wheel Adapters contain the pattern for both 5 and 6 bolt steering wheels. This makes getting the right adapter even easier. And, this new tapered adapter is only 3.90 inches wide for a seamless fit to a Flaming River column. (Also available in larger diameter for GM style). Contemporary new look in either a tapered or bell style.

**WIRING**

FR20118	Female Connector	FR20118-3	Dimmer Switch installed on column
FR20118-1	Hazard pre-69	FR20120HN	Horn Contact Kit (included with steering columns)
FRHRN2	Horn Relay	FRIGN1	Ignition Switch (also available with billet mount FRIGN3)
